Due to the different production technologies, contiguous installation of products with different thickness may give a non-homogeneous result. For this reason we do not recommend this option.

3D: We recommend laying with epoxy putty for wet environments or those subject to strong humidity.

CLEANING DURING LAYING.

If cement grouts are used, remove all residues before completely set. If some traces of dirt are still left, use an acid detergent of the kind available on the market. Never use pure acids or over-strong acid detergents because they may damage the grout.

ROUTINE CLEANING.

For general cleaning, brush the floor or use a vacuum cleaner to remove dirt or other residues. Afterwards, wash the floor with a cloth wet with a solution of a multipurpose detergent in hot water. Never clean with highly concentrated acids or bases; always use diluted solutions. The cleaning procedures described above also apply for wall tiles and trims.
